

Characterised control valve, 2-way, Flange, PN 16

- For closed cold and warm water systems
- For modulating control of air-handling and heating systems on the water side
- Air-bubble tight

Type overview

Type	DN	kvs [m³/h]	PN	n(gl)	Sv min.
R6065W63-S8	65	63	16	3.2	100
R6080W100-S8	80	100	16	3.2	100
R6100W160-S8	100	160	16	3.2	100
R6125W250-S8	125	250	16	3.2	100
R6150W320-S8	150	320	16	3.2	100

Technical data

Functional data	Fluid	Cold and warm water, water with glycol up to max. 50% vol.
Fluid temperature		-10...120°C [14...248°F]
Close-off pressure Δp_s		690 kPa
Differential pressure Δp_{max}		400 kPa
Differential pressure note		200 kPa for low-noise operation
Flow characteristic		equal percentage (VDI/VDE 2178), optimised in the opening range
Leakage rate		air-bubble tight, leakage rate A (EN 12266-1)
Angle of rotation		90°
Angle of rotation note		Operating range 15...90°
Pipe connection		Flange PN 16 according to EN 1092-2
Installation position		upright to horizontal (in relation to the stem)
Servicing		maintenance-free
Materials	Valve body	EN-GJL-250 (GG 25)
Body finish		with protective paint
Closing element		Stainless steel AISI 316
Spindle		Stainless steel AISI 304
Spindle seal		EPDM
Seat		PTFE
Characterised disc		stainless steel

Safety notes

- The valve has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.

Product features

- Mode of operation** The characterised control valve is adjusted by a rotary actuator. The actuator is controlled by a commercially available modulating or 3-point control system and moves the ball of the valve – the throttling device – to the position dictated by the control signal. Open the characterised control valve counterclockwise and close it clockwise.
- Flow characteristic** Equal percentage flow control is ensured by the integrated characterising disc.

Accessories

Electrical accessories	Description	Type
	Stem heater flange F05 (30 W)	ZR24-F05

Installation notes

- Recommended installation positions** The ball valve can be installed upright to horizontal. The ball valve may not be installed in a hanging position, i.e. with the spindle pointing downwards.

- Water quality requirements** The water quality requirements specified in VDI 2035 must be adhered to. Belimo valves are regulating devices. For the valves to function correctly in the long term, they must be kept free from particle debris (e.g. welding beads during installation work). The installation of a suitable strainer is recommended.
- Spindle heater** In cold water applications and warm humid ambient air can cause condensation in the actuators. This can lead to corrosion in the gear box of the actuator and causes a breakdown of it. In such applications, the use of a spindle heater is provided. The spindle heater must be enabled only when the system is in operation, because it does not have temperature control.
- Servicing** Ball valves and rotary actuators are maintenance-free. Before any service work on the control element is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level). The system must not be returned to service until the ball valve and the rotary actuator have been correctly reassembled in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

Flow direction The direction of flow, specified by an arrow on the housing, is to be complied with, since otherwise the ball valve could become damaged. Please ensure that the ball is in the correct position (marking on the spindle).

Dimensions
Dimensional drawings

X/Y: Minimum distance with respect to the valve centre.
The actuator dimensions can be found on the respective actuator data sheet.

Type	DN	L [mm]	H [mm]	C [mm]	D [mm]	d [mm]	K [mm]	X [mm]	Y [mm]	kg
R6065W63-S8	65	136.5	113	18.5	185	4 x 19	145	320	150	10
R6080W100-S8	80	168	113	20.5	200	8 x 19	160	320	160	14
R6100W160-S8	100	211	124	22	224	8 x 19	180	330	175	23
R6125W250-S8	125	262.5	143	22	252	8 x 19	210	350	190	31
